

THE KEIL CENTRE AUSTRALIA

Human Factors in Health & Safety

Free Webinar Series 2026

[Details](#)

Line-up for 2026...

Investigating Human Factors in Incidents with Meghann Croome

Integrating Human Factors into operations with Nicole Gray

Trauma Informed Investigative Interviewing with Meghann Croome

Managing Fatigue in High Risk Operations with Katherine Hill

Investigating Fatigue in incidents with Nicole Gray

Effective Shift Handover protocols with Katherine Hill

The details...

17 Feb 2026

Investigating Human Factors in Incidents with Meghann Croome

Discover how Human Factors principles can transform incident investigations from simple root cause analysis into a deeper understanding of human performance and system design. This webinar will explore practical techniques for identifying human and organisational contributors, improving safety outcomes, and embedding Human Factors thinking into your investigation process.

21 April 2026

Integrating Human Factors into operations with Nicole Gray

This session will cover how to design processes, manage fatigue, and optimise human performance to improve safety and efficiency. Learn how operational decisions can be informed by Human Factors thinking to create resilient systems and better outcomes.

23 June 2026

Trauma Informed Investigative Interviewing with Meghann Croome

Meghann Croome will share practical techniques for building trust, reducing retraumatisation, and gathering accurate information in safety-critical investigations. Discover how trauma-informed approaches improve both the quality of evidence and the wellbeing of those involved.

18 August 2026

Managing Fatigue in High Risk Operations with Katherine Hill

Explore practical strategies for identifying, assessing, and mitigating fatigue risks in safety-critical environments. Katherine Hill will share evidence-based approaches to fatigue management, including policy development, workload design, and behavioural mitigations. Learn how to implement systems that protect wellbeing and enhance operational performance in safety critical environments.

13 October 2026

Investigating Fatigue in incidents with Nicole Gray

Fatigue is a critical factor in many safety incidents, yet it is often overlooked during investigations. In this webinar, Nicole Gray will demonstrate how to identify fatigue-related contributors, apply Human Factors principles, and use structured methods to uncover underlying causes. Learn practical techniques for integrating fatigue analysis into your investigation process to improve safety outcomes and prevent recurrence.

4 December 2026

Effective Shift Handover protocols with Katherine Hill

Poor handovers can lead to miscommunication and increased risk in safety-critical operations. In this webinar, Katherine Hill will outline best-practice principles for designing and implementing effective shift handover protocols. Learn how to structure information exchange, reduce human error, and improve operational continuity through clear, reliable communication strategies.
